

Ana Martins

Software Engineer

Computer Engineer (BSc & MSc, 18/20) with a strong Java/Spring Boot foundation from degree and personal projects, and one year of professional experience shipping production web features (React, REST APIs, MySQL, Docker) remotely for a Swiss ESG data-management company. Seeking a junior role building Java backends and React UIs.

WORK EXPERIENCE

Software Developer Generation Impact Global

02/2024 - 02/2025

Remote, Switzerland / Part-time

An ESG data management and reporting software company.

- Built React and Astro frontend features so users could explore digested analytics of their ESG data.
- Integrated REST APIs and Slack webhooks for operational monitoring so the team was alerted when data syncs or reports failed, without watching dashboards.
- Designed MySQL schemas and SQL data pipelines for new client requirements so the extra data fitted the existing structure and report logic could be reused for each client's specific reports.
- Wrote PHPUnit unit tests and ran the stack in Docker so changes could be verified locally and shipped with fewer regressions.

PROJECTS

Incidentalists (2022)

- Built a full-stack Java, Vue.js, and Node.js app for insurance claim management so staff could register incidents and follow them in one system.
- Implemented Java backend logic to validate policy coverage and store document/image attachments so claims were only accepted when coverage and files were complete.
- Integrated REST APIs, WebSocket notifications, and CSV/Excel import so users got live claim updates and could load bulk data instead of typing rows.
- Packaged the app with Docker so the Java / Vue / Node.js stack ran the same way on every machine.

Careline (2024)

- Implemented Java Spring Boot services on PostgreSQL for patient monitoring and triage so clinical data could be stored and queried through a single API.
- Built React web features on REST APIs with WebSocket updates so clinicians could see live patient status without refreshing.
- Developed SwiftUI mobile screens and ingested IoT data via Go services so device readings reached the same patient record as the web app.

Web Cloud Deployment (2024)

- Re-architected a web app into Docker microservices, deployed them with Kubernetes, and provisioned infra with Terraform so the stack could be rebuilt and scaled without manual server setup.

TECHNICAL SKILLS

Programming Languages

Java, JavaScript, TypeScript, PHP, Python, Go, C#, C

Frameworks & Web

React, Spring Boot, Vue.js, Nuxt.js, HTML, CSS, Laravel, .NET

Databases

SQL, MySQL, PostgreSQL, MongoDB

Cloud & DevOps

Git, Docker, Kubernetes, Terraform, CI/CD, GCP, Firebase

Building & Testing

Maven, JUnit, PHPUnit, Unit testing

Concepts & Standards

Object-Oriented Programming (OOP), Inversion of Control (IoC), MVC, MVVM

EDUCATION

MSc in Computer Engineering (Mobile Computing)

Polytechnic Institute of Leiria (IPL)

09/2023 - 11/2025

Leiria, Portugal

- Grade: 18/20

BSc in Computer Engineering

Polytechnic Institute of Leiria (IPL)

10/2020 - 07/2023

Leiria, Portugal

- Grade: 18/20

AWARDS

Merit Grants (2022)

Polytechnic Institute of Leiria

- Awarded to top-performing students ($\geq 16/20$).

LANGUAGES

English

Full Professional Proficiency

Portuguese

Native or Bilingual Proficiency
